# Pharmacist Shared Medicines List (PSML)

## Webinar – 30<sup>th</sup> July 2019

Vandana Chandnani and Kate Ellis  
Australian Digital Health Agency

---

My Health Record

# Acknowledgement

---

We would like to acknowledge the traditional owners of country throughout Australia, and their continuing connection to land, sea and community. We pay our respects to them and their cultures, and to Elders both past and present.

---

# Learning Objectives

- Explain the development and functionality of the Pharmacist Shared Medicines List (PSML)
- Contrast how the PSML might be used in comparison to other sources of medicines information in the My Health Record
- Provide example PSML use cases and associate how the PSML might be applied to your clinical practice
- Provide an opportunity for Q&A

# Poll question 1

What is your primary place of work?

- a) Community Pharmacy
- b) Consultant/Accredited Pharmacist
- c) General Practice
- d) Specialist Practice
- e) Hospital
- f) Allied Health Practice
- g) Aged Care
- h) Other

## Poll question 2

Prior to this webinar, had you heard about the Pharmacist Shared Medicines List (PSML)?

a) Yes

b) No

My Health Record

Australian Government  
Australian Digital Health Agency

My Health Record

# National Digital Health Strategy – roadmap for delivery

Co-designed with all states and territories and agreed by COAG Health Council

# Pharmacist Shared Medicines List (PSML)

The PSML may be an important outcome from a medicines reconciliation as well as providing a useful reference source for future medicines reconciliation.

Access to the PSML via My Health Record is important as:

- It may include prescription and non-prescription medicines *as well as* over-the-counter (OTC) medicines and complementary medicines (such as vitamins, herbal medicines)
- Better medicines information via a PSML can reduce medication errors

Australian Government  
Australian Digital Health Agency

My Health Record

# Where does the information come from when creating a Pharmacist Shared Medicines List (PSML)?

- PSMLs might be created based on:
  - a hospital discharge medicines list
  - a medicines history provided by the consumer
  - a dose administration aid medicines list
  - a pharmacist professional service e.g. a Home Medicines Review (HMR)
- Only a pharmacist can authorise the upload of a PSML to a consumer's My Health Record

# What are the benefits of the Pharmacist Shared Medicines List (PSML)?

- ✓ Improved information sharing between health professionals
  - Opportunity for pharmacists to contribute more broadly to direct patient care
- ✓ Provides an additional source of medicines information
  - May include non-prescription, OTC, vitamins
- ✓ Help reduce medicine interactions which improves both medicine safety and patient safety

# What does a Pharmacist Shared Medicines List look like currently?

|----------------------------------------|---------------------------------------------------------------------------|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OXYCODONE & NALOXONE (TAB MR) 10MG 5MG | Targin                                                                    | Morning 1<br>Midday 1<br>Evening 1<br>Bedtime 1 | A combination tablet with two medications one to treat chronic moderate to severe pain and one which can help reduce side effects e.g. constipation | NEW medication    | Modified release tablets must be swallowed whole with an adequate amount of fluid, do not crush, chew or dissolve them. Take strictly as directed. Discuss with your doctor or pharmacist how to stop this medication; gradual reduction may be required. May cause drowsiness. It is recommended that you don't drive, use machinery or undertake any activities where alertness is required until you know how this medication affects you. Avoid alcohol while on this medication. Constipation is a common problem with this medication, drink plenty of water and laxatives may be needed. Nausea and vomiting may occur initially with this medication but should lessen after a few days. This medication may cause a dry mouth and with long term use can increase the risk of dental problems, ensure you see a dentist regularly. Do not drink grapefruit juice while on this medication or take St. John's Wort |
| PANTOPRAZOLE (TAB EC) 20MG             | Somac, Sozol, Salpraz, Panto, Otpan, Gastenz, Pantofast, Apo-Pantoprazole | Morning 1<br>Midday 1<br>Evening 1<br>Bedtime 1 | To reduce acid secretion in the stomach for treatment and prevention of ulcers or reflux oesophagitis                                               | NEW medication    | Swallow tablets whole, do not crush or chew. Take regularly. If you are taking this medication for an ulcer, you should go to your doctor regularly for checkups to make sure that your ulcer has healed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

This Medication Profile is NOT intended for prescribing purposes, it represents a curated medicines list that has been compiled with information available at the time of discharge. Please read all the directions carefully. Do not change treatment unless directed by your regular doctor. The information provided above is general in nature and is designed as an educational aid only. It should only be read in conjunction with the manufacturer's approved information. If you have any questions relating to this medication profile, please contact and discuss with your regular doctor and/or pharmacist.

# When will I start seeing PSMLs in a patient's My Health Record?

- Webstercare, Fred MedView and HPS are currently working on functionality to allow a pharmacist to connect to the My Health Record system and begin uploading PSML for their patients
- Stage 1 will involve PSML being uploaded as a PDF document
- Capabilities expected to be progressively rolled out over the next year

# What could PSML look like as it's progressively rolled out?

| Pharmacist Shared Medicines List                                                                |                             |                                              |                             |                 |                   |                                    |                                                                                     |                                  |
